EDUCATION

MCA (Pursuing) 2024–2026
HPU Regional Centre, Dharamshala
CGPA: 8.2 (Ongoing)

BCA (2021–2024)
Himachal Pradesh University
CGPA: 8.5

TECHNICAL SKILLS

Programming:
Python, HTML, CSS

Frameworks & Web:
FastAPI, Django, Streamlit, REST APIs, Stripe Payment

AI / ML:
Machine Learning, Deep Learning, NLP, Computer Vision, Feature Engineering, Predictive Analytics

Generative AI:
LLMs, RAG, LangChain, LangGraph, Agentic AI, Prompt Engineering, Gemini API, Claude API

Libraries & Tools:
Pandas, NumPy, Scikit-Learn, Plotly, Prophet, ReportLab, Sentence Transformers, OpenCV, Tesseract OCR, pytesseract

Databases:
MongoDB, SQLite, FAISS

Deployment Tools:
Streamlit Cloud, GitHub Actions, Uvicorn, Render

Version Control:
Git, GitHub

PROFESSIONAL SUMMARY

MCA student (Pursuing) specializing in AI, Machine Learning, Generative AI and Agentic AI. Completed a 6-month Python Developer Internship at CS Soft Solutions where I built and deployed multiple AI-powered applications using Python, FastAPI, LangChain and LLMs. Experienced in end-to-end AI development — from data processing and model integration to deployment on cloud platforms.

EXPERIENCE

Python Developer Intern
CS Soft Solutions (India) Pvt Ltd, Mohali | Jan 2026 – Jun 2026

- Developed and deployed AI and Machine Learning applications using Python, FastAPI and Streamlit.
- Worked extensively on NLP tasks including text classification, entity extraction and semantic search.
- Built complete RAG (Retrieval-Augmented Generation) pipelines using LangChain and FAISS vector databases.
- Implemented Generative AI features using Google Gemini API and Claude API for intelligent response generation.
- Designed Agentic AI workflows using LangGraph for multi-step autonomous task execution.
- Applied Deep Learning and feature engineering techniques for predictive analytics and forecasting models.
- Worked on AI automation workflows reducing manual effort through intelligent data processing pipelines.
- Deployed applications on Streamlit Cloud; managed project versioning and collaboration using Git and GitHub.

PROJECTS

1. AI Expense Analyzer — OCR Edition

Stack: Python, Streamlit, Tesseract OCR, pytesseract, SentenceTransformers, Prophet, Plotly, ReportLab, SQLite, bcrypt, SMTP

- Built an AI-powered expense analyzer with OCR receipt scanning — Tesseract extracts merchant name, amount and date automatically from bill photos (JPG/PNG/WEBP).
- SentenceTransformer (all-MiniLM-L6-v2) embeddings provide AI-based automatic expense categorization using cosine similarity matching.
- Integrated Facebook Prophet for time-series forecasting to predict next-month spending with confidence intervals on dashboard.
- Developed interactive Plotly dashboards, rule-based Expense Chatbot, PDF report generation and SMTP budget email alerts.
- Secure multi-user authentication with bcrypt password hashing and SQLite backend.

[GitHub](#) → [Live Demo](#) →

2. AI Interview Agent

Stack: Python, FastAPI, LangGraph, Google Gemini, Streamlit, SQLite, SQLAlchemy

- Built a fully automated AI interview system that conducts interviews, evaluates answers and generates performance reports — end to end without human involvement.
- Designed a stateful LangGraph agentic workflow that manages the complete interview lifecycle across multiple steps.
- Gemini AI dynamically generates role-specific questions for Python Developer, ML Engineer and GenAI Engineer tracks.
- Each answer is evaluated with a score, strengths, weaknesses and a final detailed candidate performance report.

[GitHub](#) → [Live Demo](#) →

3. RAG-Powered Document Chatbot

Stack: Python, LangChain, Google Gemini, FAISS, Streamlit

- Built a complete RAG pipeline from scratch — PDF ingestion, text chunking, embedding generation, FAISS vector indexing and semantic retrieval.
- Users upload any PDF document and ask questions; Gemini generates accurate, context-aware answers from retrieved chunks.
- Implemented persistent conversation memory so follow-up questions are handled naturally across the session.

4. E-Commerce Web Application

Stack: Python, Django, SQLite, Stripe API, HTML, CSS

- Built a full-featured Django e-commerce platform with user registration, login, session management and role-based access.
- Developed product catalog, product detail pages, shopping cart and order management system.
- Integrated Stripe Payment Gateway for secure real-time online transactions.

ACHIEVEMENTS

- Completed 6-month Python Developer Internship at CS Soft Solutions, Mohali.
- Built and deployed 4 live AI applications covering OCR, NLP, RAG, Agentic AI and Generative AI.
- Hands-on experience across ML, Deep Learning, NLP, GenAI, Agentic AI, RAG and Computer Vision.
- CGPA: 8.5 in BCA | 8.2 in MCA (Pursuing).
